DELIVERY OF SEEDS. The prices listed include free delivery of all Vegetable and Flower Seeds when cash accompanies the order, except such varieties as are priced at a 100 lb. rate. Orders priced at this rate for Vegetable Seeds, Peas, Beans, Sweet Corn, Lawn Grass, Grass Seeds and such heavy and unmailable goods as Field Corn, Roots, Seed Potatoes, Insecticides and Fertilizers will be shipped by Truck, Freight or Express, charges to be collected from the customer. If this class of goods must be shipped by parcel post please include postage with order.

TERMS OF SALE. Our regular terms are CASH WITH ORDER. Remittance by Bank Check, Post Office or Express Money Order is safest. Register letters containing money. Please do not ask for C.O.D. shipment unless you enclose 25% of the amount of the order. In conformity with other responsible seedsmen, Comstock, Ferre & Co. warrants to the extent of the purchase price that seeds, bulbs or plants sold are as described on the container within recognized tolerances. Seller gives no other further warranty, express or implied.

SPECIAL QUOTATIONS. Prices, particularly of Field Seeds, depend upon market conditions and are subject to change without notice. We will quote large quantities at prices as low as the highest quality of seed will permit. Let us quote you current prices on Grass and Field Seeds, Seed Potatoes and Onion Sets.

SEED TREATMENT. The treatment of seeds before planting is good insurance against loss and poor stands due to unfavorable weather and soil conditions. The so called failure of seeds to germinate is more often due to outside influences than any fault in the seeds themselves.

We recommend that our customers use materials only with the most recent instructions of manufacturers and Experiment Station authorities. Upon request we can furnish seed on bulk orders treated as required at a slight advance in price, but we do not guarantee or hold ourselves responsible for results.

MAIL ORDERS. Early orders are advisable, particularly for seed to be sown in greenhouses and cold frames for growing early plants. Very early orders for general garden planting may have to be held for economical handling until crops of seed are received and packaged.

CONNECTICUT SALES AND USE TAX. Residents of Connecticut are liable for and we must collect a tax of 3½% upon a few items, such as Plant Labels, Twines, Paper Pots and feed for Wild Birds.

BEFORE MAILING YOUR ORDER. Write your name, address and shipping point in full and plainly on the order sheet. Be sure to give nearest freight or express station if different from your post office address.

We will gladly send copies of this catalogue to any of your friends who may be interested.

View of our building from Main St. in Old Wethersfield

We are surrounded with beautiful Colonial style buildings and historical sites. We are but four buildings from the noted historical WEBB HOUSE which played such an important role in the final stages of the revolutionary war; being the meeting place between Washington and Rochambeau which resulted in the victory at Yorktown.

Our main building contains a portion of one of the Old Silas Deane Warehouses. Silas Deane also played an important role in the revolutionary war and was an early diplomat to France.

Our business was established in 1820 and has been in continuous operation for one-hundred and forty one years. The present management represents the third generation of one family that has devoted its efforts to keep traditions of quality and service alive. We are aware of the necessity of being "up to date" and we offer the most recent developments in gardening, both for commercial use and for the home. We are proud of the past and hopeful for the future. We would be pleased to have you visit Old Wethersfield and our plant anytime during the year.

We recommend thorough dusting with Rotenone or Malathion Dust as an efficient control for Mexican Bean Beetle. Apply every two weeks after beetles appear. Plant 1 lb. seed per 100 feet of row.

Plant in well fertilized hills 3 feet apart each way, putting 5 or 6 kernels in each hill and covering to a depth of not more than 1½ inches. When 6 inches high remove all but the 3 most vigorous stalks from each hill. For a succession throughout the season plant several varieties early in May, including first early to late varieties. A good main crop variety planted at intervals of two weeks until the middle of July will produce a continuous supply. Treatment with Spergon is very effective in insuring the germination, especially for early plantings, and controls seed borne diseases.

FLOWER SEEDS OF SUPERIOR QUALITY

Marigold, Petite

5190

We have combined annual, biennial, and perennial varieties listing them alphabetically. Each is identified by a symbol: (A) for annual, (P) for perennial, and (B) for biennial. The symbol is followed by the average number of seeds per ounce.

Annuals are flowers that bloom the first year from seed. Biennials bloom the second year after planting from seed and usually do not live for a third year. Perennials usually flower the second year after planting from seed and ordinarily bloom for several years, some for many years.

The best results with many annuals may be had by sowing them directly in beds where they are to flower. The hardier varieties such as Calendula, Larkspur, Bachelor Button, and Poppy may be sown very early, while the more tender Balsam, Nasturtium, Marigold, and Zinnia should be planted later when the ground is warm.

Perennials should be sown in June to get best results. They should be transplanted in the late Summer or Fall.

ASTORIA BENT Fine leaved dark green, forms on extra fine turf with other grasses. May be mowed closely.

HIGHLAND BENT Very fine leaved, creeping habit, grows well alone or mixed with other grasses. Permanent on medium and extra dry soils.

CHEWING'S FESCUE New Zealand strain with fine dark green leaves forming a close and lasting turf. Thrives on dry sandy soils, withstands partial shade, and does well under all ordinary conditions.

CREEPING RED FESCUE Fine leaved strain that spreads from roots, making a dense turf. Especially valuable in shade and does well in dry sandy soils.

ILLAHEE RED FESCUE Improved strain which withstands heavy wear. Fine leaved, creeps vigorously and recovers from drought quickly. Forms a thick turf that crowds out weeds.

ALTA TALL FESCUE Strong growing forage grass with broad leaves. Does well on poor soil and makes excellent pasture. Coarse, but relished by stock.

KENTUCKY BLUEGRASS One of the best permanent lawn grasses. Vigorous, fine-leaved and dark green. Best used in mixtures, as it requires three years to become fully established.

MERION KENTUCKY BLUEGRASS Dense dark green strain resistant to heat and drought, adapted to producing extremely fine bluegrass lawns; usually mixed with fescue and bent, it withstands cutting and makes a fine green lawn all summer. Seed is small, plant one-half as much as Kentucky Bluegrass.

RED TOP Dependable fine-leaved hay grass. Also used in lawn mixtures to form a quick turf of good quality.

TIMOTHY The common hay grass. Produces a heavy crop on nearly all soils.

ANNUAL RYEGRASS (Common) Quick growing grass used as a nurse grass in lawn grass mixtures and becoming widely used as a cover crop planted in August or September and ploughed under in the spring.

PERENNIAL RYE GRASS Not as strong growing as the common rye grass, but ordinarily persists for several years. For lawns and pastures.

ORCHARD GRASS Tall vigorous pasture grass, especially adapted to moist and shaded places.

BROME GRASS, LINCOLN This is the only strain suitable for producing a good crop in our climate. One of the most palatable feeding grasses, it produces a very heavy crop on well drained land.

REED CANARY GRASS A coarse tall growing grass producing an extremely heavy crop on soils too wet for ordinary grasses. Useful for pasture or cut for green feed.

ALFALFA

Alfalfa excels all other green crops in yield, feeding value, resistance to drought and soil improvement. The varieties we offer are highly recommended for hardiness and disease resistance.

Insure thrifty stands on clover and alfalfa mixtures with the new Simplex Nodogen (Alfalfa and all types of Clover combined in one package)

ATLANTIC Variegated, a high yielder introduced by the New Jersey Agricultural Experiment Station for eastern plantings.

BUFFALO Resistant to bacterial wilt disease. Recovers rapidly after cutting and makes a large fall growth.

RANGER Variegated, very resistant to bacterial wilt, equal to Grimm in cold resistance.

VERNAL New strain resistant to disease, produces an enormous crop, recovers quickly after cutting.

CLOVERS

ALSIKE Strong spreading clover, longer lived than Medium Red on either dry or poorly drained soils. Should be used in all hay and many pasture mixtures.

KENLAND RED Strong growing strain, resistant to anthracnose, outproduces the ordinary medium red clover and frequently lives longer.

MEDIUM RED Northern grown seed adapted to the New England climate. Most widely used clover.

LADINO Best white clover for improved pastures. Makes double the growth of other dwarf white clovers and quickly recovers from pasturing. One pound per acre is sufficient with other grasses.

WHITE DUTCH Low, spreading variety for pastures and lawns. Forms a mat of creeping stems and grows throughout the season. For lawns on dry banks and on poor soil we recommend sowing at least 1 lb. to 5000 sq. ft. in addition to the lawn grass mixture. For pastures 5 lbs. per acre is ample.

WHITE SWEET Tall-growing biennial variety. Thrives on all but very acid soils. Valuable for pasturage and soil improvement.

CRIMSON An annual variety much used as a cover crop, often sown in the spring as it is not entirely certain to winter over in New England.

BIRDSFOOT TREFOIL Deep rooted perennial clover-like plant that endures drought and does well under a variety of soil conditions. On low fertility acid soils too poor to grow clover it produces forage of high feeding value.

All legumes should be inoculated to insure strong growth and good crops, particularly Alfalfa and new plantings of clovers. **NODOGEN FOR CLOVERS AND ALFALFA.**

LAWN GRASS MIXTURES

The quality of a lawn depends as much upon the kind of seed sown as the care in preparation of the soil. Our mixtures are carefully planned, each to meet some particular condition of soil or use. The grasses used are selected for such high purity and germination with a negligible content of weed seeds and waste that each pound is sufficient to sow 200 sq. ft. or more. We will be glad to advise you as to special mixtures for any unusual conditions. Add postage for quantities of 5 lbs. or more.
